ABSTRACT

This report summarizes test score information on a city-wide, regional, and school-by-school basis for staff and community review of pupil progress in reading and mathematics achievements, Primary Unit through grade 11. The data were obtained in the 1979-80 school year. Norm- and criterion-referenced tests were used. The intent of the report is to contribute to communications between the school system and those served by it, and to provide a common factual basis for setting priorities and carrying out improvements in Detroit's educational system. Detroit Public Schools

FOREWORD

This report summarizes test score information on a city-wide, regional, and school-by-school basis for staff and community review of pupil progress in reading and mathematics achievements. The data were obtained in the 1979-80 school year.

The intent of this report is to contribute to communications between the school system and the people it serves and to provide a common factual basis for setting priorities and carrying out improvements.

Research in education shows that many things affect test scores, not all of which are within the control of the schools. It is apparent, for example, that motivation, effort, and interest, as well as things that children learn outside of school, influence test results. Test results should not be considered as the only indicators of pupil educational accomplishments.

It is hoped that citizens and school personnel will gain from this 1980 summary of achievement test scores, a fuller understanding of the diversity of educational accomplishments of the school district's pupils.

Arthur Jefferson, General Superintendent of Schools
Stuart C. Rankin, Assistant Superintendent

SUMMARY OF ACHIEVEMENT TEST SCORES--1980

The current program of regularly scheduled city-wide testing was adopted in the Detroit Public Schools beginning in the school year 1978-79. Pupils in the Primary Unit through Grade 11 are included in city-wide testing of reading and mathematics achievements.

The purpose of this report is to share objective information about pupils and schools with staff and community leaders who are interested in the progress of education in Detroit. The report contains information about pupils' measured achievements in reading and mathematics. The first section is descriptive and presents city-wide information; the remaining sections present school and region information.

The Achievement Tests Used

Two types of tests, norm-referenced and objective-referenced, were administered to pupils in the Detroit Public Schools. Norm-referenced tests are used to determine how well students are performing in relation to other students in corresponding grades. Objective-referenced tests are used to determine how well students are performing in relation to given objectives. Both tests reveal how well students progress toward academic goals of education. The tests used during the 1979-80 school year, the grades in which they were given, and their administration dates follow.

Norm-Referenced Tests

Primary Unit; Grades 3-8 and 11A
California Achievement Tests (CAT), Form C, 1977 Edition, Levels 11-19 (Reading Comprehension, Mathematics Computation, and Mathematics Concepts and Applications), administered April 1980.

Objective-Referenced Tests

Grades 4, 7, and 10
Michigan Educational Assessment Program (MEAP), 1978 Edition (Reading and Mathematics), administered October 1979.

Grade 9
Ninth Grade Communication Skills Test, 1978 Edition, administered May 1980.

Test Contents and Skills Measured

California Achievement Tests (Primary Unit, Grades 3-8 and 11A)

READING COMPREHENSION measures skills in literal, interpretive, and critical comprehension. Literal comprehension requires the student to understand what is actually stated in a passage; interpretive comprehension requires the student to think inferentially and to understand what is implied in a passage; critical comprehension requires the student to evaluate and make judgements about what is read.

MATHEMATICS COMPUTATION measures a sampling of computation skills commonly taught and understood at each grade level. The Primary Unit I test measures skills in addition and subtraction; the Primary Unit II test measures skills in addition, subtraction, and multiplication of whole numbers; tests above the Primary Unit measures skills in addition, subtraction, multiplication and division of whole numbers.

MATHEMATICS CONCEPTS AND APPLICATIONS includes items about a wide range of mathematical skills. The emphasis is on concepts rather than on isolated facts. Numeration, number and set theory, number sentences/properties, common scales, geometry and story problems, measurement, graphs and measurement/graphs are the skills measured.

Michigan Educational Assessment Program (Grades 4, 7, and 10)

READING measures 25 reading objectives in Grade 4, 23 reading objectives in Grade 7, and 24 reading objectives in Grade 10. Matching a series of words with the appropriate definition, identifying factual phrases which have the same meaning, and selecting a statement that best summarizes a reading selection are examples of the reading skills that are measured.

MATHEMATICS measures 33 mathematics objectives in Grade 4, 34 mathematics objectives in Grade 7, and 35 mathematics objectives in Grade 10. Selecting a number which is greater or less than a given number; reading the temperature on a thermometer; and subtracting a two-digit number from another two-digit number are among the skills which are measured.

Ninth Grade Communication Skills Test (Grade 9)

COMMUNICATION SKILLS assesses nine objectives; 4 in reading, 3 in writing, and 2 in study skills.

National Norms

The interpretation and use of norm-referenced test information is simplified by establishing reference data or norms to make it easier to infer comparisons and state conclusions. Norms data, provided by the publishers of the tests used, are obtained by administering the tests to specific groups or individuals. Such groups selected for comparison purposes are called norms groups. When they are called "national norms groups," the term "national" refers to the fact that the pupils whose scores were used to establish the publisher's reference data were enrolled in schools in representative sections of the nation. Test publishers endeavor to secure the most representative norms groups possible. They strive to ensure that all minority groups are properly represented in the national norms populations and that pupils in urban centers participate in test standardizations.

Types of Test Scores

Objective-referenced tests provide scores which specify the numbers of items per objective that a student answered correctly. The scores indicate whether a student has mastered, or not mastered, the objectives on the tests. Scores are often expressed as percents which indicate the percent of questions correctly answered for each objective.

Norm-referenced tests provide raw scores and more interpretable scores derived from them. The numbers of test questions answered correctly, are not very helpful when it comes to studying results obtained from pupils on different tests or in different grades. For this reason, raw scores are converted to other units of measure, such as grade equivalent scores, in order to be interpreted meaningfully.

Grade equivalent scores correspond to raw scores in such a way as to indicate the grade and the month within the grade at which typical pupils obtain the raw scores. For example, if a pupil's grade equivalent score is 3.2, the number of questions answered correctly on the test is equal to that of typical pupils in the third grade at the end of the second month. Similarly, a grade equivalent score of 5.7 on a test indicates achievement corresponding to that of typical pupils in the fifth grade at the end of the seventh month. Such scores are derived from norms group data obtained in standardizing a norm-referenced test.

Means of Test Scores

When studying norm-referenced scores of groups of pupils in different grades and schools, it is helpful to know the means or averages of the pupils' scores. These may be compared with the corresponding national means, region means, and city means. National means are the means of the scores of the pupils in the test publisher's national norms groups. National means are good reference points, but they are not necessarily goals for individual pupils or schools. Some pupils or schools will be doing well if they achieve near national means; others should achieve at higher levels. The means of scores in grade equivalent units found in this report are derived by adding the grade equivalent scores obtained by the pupils and dividing by the number of pupils, that is, by averaging their grade equivalent scores.

City-Wide Test Results

Detroit city-wide results of the reading and mathematics achievement tests given in 1980 are summarized in Tables I through VI on Pages 9-14. Brief descriptions of the tables follow.

Percents of Detroit Pupils' Scores At or Above National Means

Table I, Page 9, shows the percents of Detroit pupils' scores at or above national means. In 1980, from 30 to 61 percent of Detroit pupils in the Primary Unit through Grade 11 had reading test scores at or above the national means for their grades. Similarly, from 31 to 63 percent of Detroit pupils had mathematics test scores at or above the national means for their grades. These figures are compared with approximately 50 percent of the pupils in the national norms groups who had scores at or above their group means. The California Achievement Tests were administered for the first time in 1980 to students in Grades 3-7. Therefore, Table I shows no comparative data for these grades.

Means of Detroit Pupils' Scores

Table II, Page 10, shows the means of Detroit pupils' achievement test scores. The means are expressed in grade equivalent units. Since 1979, there has been a one month rise in average grade equivalent scores in both reading and mathematics in Primary Unit I and a one month rise in average grade equivalent scores in mathematics in Primary Unit II. Since the California Achievement Tests were administered for the first time in 1980 to students in Grades 3-7, no comparative data are available for these grades.

Ranges of Pupils' Scores

Table III, Page 11, indicates the ranges of pupils' scores. In addition to showing the grade equivalent means, which are central points in a distribution of grade equivalent scores, Table III shows the full range or spread of grade equivalent scores from the lowest to the highest in each grade.

Specifically, the ranges of 1980 pupils' scores in the first year of the Primary Unit cover almost four years in reading and mathematics. This is shown by the fact that some pupils in PU-1 have the lowest score of 0.1 and some have the highest score of 3.7 in reading and 3.5 in mathematics. These ranges become wider in the advanced grades. In Grades 8 and 11A, the spread of individual achievements reaches from the beginning of the second grade to beyond the twelfth grade in reading and in mathematics. Research has shown that this increasing spread of achievements is common because as students build on their previous learning, they advance at different rates.

Percents of Pupils' Scores Below Average, Average, and Above Average

The percents of 1980 pupils' scores that may be considered in the below average, in the average, and in the above average ranges are shown in Table IV, Page 12. Detroit has about as many below average achieving pupils as are found in the national norms groups. Detroit, however, has larger percents of average achievers and smaller percents of above average achievers.

Percents of Pupils Attaining Indicated Proportions of Objectives on the Michigan Education Assessment Program Test

Table V, Page 13, shows the percents of students correctly answering 0 to 24 percent, 25 to 49 percent, 50 to 74 percent, and 75 to 100 percent of the questions relating to reading and mathematics on the Michigan Education Assessment Program Test.

In Grades 4 and 7 there has been a decline in the percent of students attaining 0-24% of the items correct. This corresponds to an increase in the percent of students attaining 75-100% of the items correct. The data reflect increases in the percent of students mastering 75-100% of the reading and mathematics objectives both in 1978 and 1979.

The Michigan Education Assessment Program Test was administered for the first time in 1979 to students in Grade 10. Therefore, no comparative data are available for this grade.

Percents of Students Attaining Mastery on the Ninth Grade Communication Skills Test

Table VI, Page 14, shows the percents of students attaining mastery on the Ninth Grade Communication Skills Test. The percents range from 54.3 for Capitalization and Punctuation to 91.3 for Written Directions.

Test Results for the Regions and the Schools

The next sections of this report contain summary tables for the regions, similar to the city tables, and data sheets for the schools. The school pages are arranged in alphabetical order by school within region. The school pages for the city-wide schools follow the six tables that summarize the city-wide test results. Abridged editions of the city-wide report have been especially prepared for each region.
